## ABOUT INDUSTRY

**Global Perspective:** The global automotive industry is undergoing a paradigm shift at present in trying to switch to alternative/less energy intensive options. The electric vehicle market has witnessed rapid evolution with the ongoing developments in automotive sector. Favourable government policies and support in terms of subsidies and grants, tax rebates and other non-financial benefits in the form of car pool lane access, and new car registration in the increasing vehicle range, better availability of charging infrastructure and proactive participation by automotive oems would drive the global electric vehicle sales.

**Indian Scenario:** The indian automotive industry is the fifth largest in the world and is slated to be the third largest by 2030. Catering to a vast domestic market, reliance on the conventional modes of fuel intensive mobility will not be sustainable. In an effort to address this, federal policymakers are developing a mobility option that is “shared, connected, and electric” and have projected an ambitious target of achieving 100 percent electrification by 2030.
